

2026 Child Support Models & Percentage-of-Income Tables by State

Category: Family Law | Data retrieved: 2026-08-12

All 50 states + DC classified by child support calculation model (Income Shares, Percentage of Income, or Melson Formula). The six Percentage-of-Income states have explicit statutory percentage tables; the three Melson Formula states (DE, HI, MT) apply a self-support reserve layer. Income Shares states each publish a state-specific 'Schedule of Basic Obligations' that must be sourced from that state's IV-D agency — only the model classification is provided here, not the dollar schedules.

Disclaimer

Informational reference only — NOT legal advice. Child support is a YMYL (legal/financial) topic; errors can cause legal liability and ranking penalties. Guidelines change and judges may deviate. The Income Shares 'Schedule of Basic Obligations' dollar tables are NOT included here — each state publishes its own and must be sourced from that state's child support agency before use. Always verify the current guideline with the relevant state IV-D agency or a qualified family-law attorney.
